Daetwyler Clean Energy announces installation of Modular PV Racking System for Biltmore Estates

Huntersville, NC, November 18, 2011: Daetwyler Clean Energy (DCE) announces the installation of a 1.2MW ground mount system for Biltmore Estates, Asheville, NC.

"Daetwyler Clean Energy's Modu-Rack ground mount system was recently installed "stated Bill Taylor, Vice President, Global Business Development, Daetwyler Clean Energy. "We proudly supported Sunenergy1 with this project that features 179 of our cost effective ground mount arrays that securely fastens 5,000 Bosch 240W panels. Modu-Rack® was chosen due to its unique design which can accommodate a steep slope, a large span while providing for a fast installation at a price point unmatched by others.

The benefits of DCE's Modu-Rack® are numerous. Off-site construction provides better quality control by allowing companies to mount, string and pretest each assembly before it reaches the job site. This, combined with Daetwyler's exclusive single-point soil anchoring system provides for faster installation at a significant lower cost.

Daetwyler Clean Energy is known throughout the international renewable energy market as a premier solar mounting (racking) hardware manufacturer. Their experienced engineering and fabrication experience provides direct to installers and project developers reliable solar mounting systems most. In addition to providing the Modu-Rack® ground mount systems, they offer mounting solutions for flat and pitched rooftops, ground mount, pole mount, as well solar parking canopies.

For more information on the Modu-Rack and other PV mounting solutions, please visit their website www.daetwylerce.com or contact Bill Taylor at 704-659-7474; e-mail: btaylor@daetwylerce.com
